

Postdoctoral Research Position in Cancer Surveillance Statistics

Description:

Postdoctoral Research Fellow position in cancer surveillance statistics is available at Dana-Farber Cancer Institute and Harvard School of Public Health. This position involves methodological developments and applied work in longitudinal data analysis, survival analysis, modern multivariate analysis (large p , small n), variable/model selection and robust prediction. Potential areas of application are cancer surveillance, cancer trend analysis, cancer disease mapping and health disparities. We encourage candidates with strong statistical and computational backgrounds to apply.

Qualifications:

Qualifications are a PhD in statistics or biostatistics, as well as good written and oral communication skills.

Additional Information:

Scientific questions regarding this position can be sent to Yi Li at yili@jimmy.harvard.edu. To apply, send cover letter describing your research interests and interest in the position, with CV and names of three references. In your application, please reference "Cancer Surveillance Statistics Postdoc". Application materials should be sent by email to biostat_postdoc@hsph.harvard.edu, or mail to:
