Biostatistician I

Cystic Fibrosis Therapeutic Development Network

Seattle Children’s Research Institute

The Biostatistics and Clinical Data Management (BCDM) group at the Cystic Fibrosis Therapeutic Development Network Coordinating Center (CF-TDNCC) supports controlled clinical trials, observational studies and retrospective data analysis projects. Our biostatistics team members are accomplished CF researchers and have extensive experience in study design, data safety monitoring board (DSMB) support and reporting, generation of statistical reports, manuscript preparation and consulting.

Job Description: Work under immediate technical direction to prepare data for analysis, conduct routine statistical analyses, provide statistical consultation, and document data sets and analyses.

Key Responsibilities:

- Assist with statistical data analysis: provide statistical analysis of project data using existing statistical packages.
- Participate in summary preparation: prepare written summaries and tables of results for use in project reports and scientific papers.
- Provide input into data collection, management, and analysis systems design.
- Provide statistical analyses in support of consulting projects and summarize results: participate in study design and the development of analysis plans; provide statistical consultation with collaborating statistical staff.
- Participate in quality assurance efforts: follow quality assurance procedures for data management and statistical analyses.

Preferred Qualifications:

- Master’s degree in statistics, biostatistics or equivalent.
- Strong oral and written communication skills. Critical thinking skills.
