The Department of Biostatistics and Informatics in the Colorado School of Public Health anticipates one or more hires in its consulting/collaboration unit, the Colorado Biostatistics Consortium (CBC). The CBC is recruiting collaborative biostatisticians from a wide variety of expertise areas to develop collaborations with one or more Departments in the School of Medicine. Research Instructors and Associates are key research-faculty positions in the Department of Biostatistics and Informatics that support the collaborative and consulting missions of the department. These positions will join 9 other faculty in the CBC and over two dozen faculty and research personnel in the Department of Biostatistics and Informatics.

Research Instructors require an MS degree with 2+ years of collaborative experience. They are expected to work in a team of design and analysis experts to provide collaborative support to CU Anschutz medical and health researchers. Research Associates require a PhD degree with 2+ years of collaborative experience and are expected to become a significant contributor in their collaborations, partnering to define and shape the research direction of the team. Both positions works with investigators on the design and analytical aspects of the research process, including: design of new studies, structuring data collection systems, the application of state-of-the-art methodologies, analyses, and preparation of abstracts, oral and poster presentations, and scientific manuscripts. Depending on the particular collaborations, interesting biostatistics research opportunities may arise, although it is not the emphasis of the position.
