Research Intern – Quantarium Corporation

Company

Quantarium, an Artificial Intelligence engineering company founded by a team of leading scientists and Ph.D.’s has brought a disruptive set of technologies across a broad range of markets that focus on real estate based analytics, technologies and advanced engineering services.

Position Description:

Quantarium is looking for Research Interns with experience in statistical analysis and machine learning. You will work closely with our Data Science team to help in designing and implementing cutting-edge data analysis and information processing systems. If you’re looking for an opportunity to work with the latest technologies in an innovative and rigorous development environment, this is your chance. We will provide dedicated and highly experienced mentors throughout the entire experience.

Primary Responsibilities:

- Perform statistical data analysis and machine learning.
- Work closely with our data scientists in the research and development of the core algorithmic components of our solution.

Scope:

This is an individual contributor position.

Required Skills/Education:

- Master of Science or PhD in statistics, biostatistics or data science.
- Programming experience with exposure to statistical software R or Python.
- Strong analytical skills.
- Strong communication skills, both written and verbal.

Desired Skills/Experience:

- Experience with real estate analytics is a significant asset.
- Understanding of time series analysis and forecasting.

Working Conditions:

This position operates in Bellevue. Travel will be minimal.

Position Type:

Part-Time/Temporary
